

COURSE OUTCOMES:

1. Biochemistry subject will be able to demonstrate an understanding of fundamental biochemical principles such as the structure and function of biomolecules, metabolic pathways and the regulation of biochemical processes.
2. It will gain proficiency in basic lab techniques in both chemistry and biology and be able to apply the scientific method to the process of experimentation and hypothesis testing.

SUBJECT OUTCOMES:

1. The students develop better understanding about structure, function and metabolism of carbohydrates, lipids, proteins, nucleic acids and amino acids etc.
2. It enables the students to to learn about various biochemical techniques like spectrophotometry, chromatography and electrophoresis etc.
3. Students also get the wide knowledge about molecular biology.
